Consultant Update - Walker Parking

March 29, 2007

Walker Parking Consultants presented an interim report of findings of the parking study to the CMP Steering Committee on March 21, 2007. Walker also presented various data regarding current and historical trends in enrollment, employment and housing. Walker is continuing to evaluate specific parking issues revealed by the focus group interviews and community interviews conducted by Burt Hill. Walker is also examining the potential for recommending various methods of reducing overall parking demand through the use of appropriate transportation demand management techniques (TDM), such as increased use of transit, bicycles, ride sharing, and financial incentives.
